FUSION MENU · FOR STAFF AND MANAGEMENT

Running a Fusion server

The day-to-day handbook for your staff team: the admin panel, reports, moderation, the anticheat, managing players and staff, departments, and keeping the server healthy. Setup and every setting are in the Server Owner's Guide.

`F10` admin panel `Home` noclip `/reports` open reports `/announce` message everyone

Staff ranks

Every staff member has one or more **roles**. A role has a **priority**, and the higher one always wins.

ROLE	PRIORITY	CAN DO
Player	0	Everyday features. Every player has it.
Moderator	50	Admin panel, reports, kick, warn, freeze, revive, heal, teleport, spectate, noclip, logs
Admin	100	Everything admin: bans, money, items, jobs, settings, roles below their own
Owner	1000	Everything, always. Can't be removed.

- **Staff can only act on people below them.** Kick, ban, warn, freeze, kill and log out only work on players with a lower priority, and you can only hand out roles below your own. Owners are exempt.
- The owner can rename these, change what they allow, and add roles like *Senior Moderator*, *LSPD Command* or *Donator*.

The admin panel

Press `F10` or type `/admin`. You only see the tabs your role allows.

TAB	USE IT FOR
Dashboard	Players and staff online, bans, uptime, recent activity, quick actions
Players	Everything you do to an online player: go to, bring, spectate, revive, freeze, message, warn, kick, ban, money, items, job, roles
Characters	Any character, online or offline: names, money, job, delete
Reports	Player reports and admin requests (red badge = open)
Bans	Search, unban, ban someone who is offline
Anticheat	What the anticheat caught and what it did
Logs	Every admin action, money and item change, connection and setting change
Alerts	Send an emergency or AMBER alert to every phone; alert history
Housing	Homes, their entrances, exits, garages and residents
Server	Announcements, clean-up tools, start / stop / restart a resource
Settings, Roles, Jobs, Items, Vehicles	Configuration (usually admins and the owner)
Script Configs, Updates, Support	Other scripts' settings, Fusion updates, support files (owner)

Every location setting has a **Here** button: stand where the thing should be and click it.

Daily routine

- **Reports first.** F10 › Reports. Claim anything open, even if you can only reply later.

- **Anticheat.** F10 › Anticheat: look at new detections. Most are clear-cut; check anything marked *Alert* or *Log* before acting.
- **Logs.** F10 › Logs: scan for large money or item changes and anything staff did that looks off.
- **Dashboard.** Player count, staff on duty, uptime. Use *Delete empty vehicles* if the city is cluttered.
- **Owners:** F10 › Updates for a waiting Fusion update, and the console for script updates or warnings.

Reports

Players send reports from **M › Help & Reports**, `/calladmin` or `/report`. Staff with report access hear a sound and see a red badge.

- **Claim** it so others know it's yours. The player is told who is helping.
- **Go to** the player or the report location, or **Bring** them to you.
- **Message** them without leaving what you're doing.
- **Close** with a short note. The player sees it, and it's kept in the logs.

> **Tip:** claim before you go. Two staff arriving at the same report wastes both your time.

Moderation

Use the lightest step that fixes the problem. Every action is logged with your name.

STEP	HOW
Talk	Message them (Players › Message) or go to them
Warn	Players › Warn, or `/warn`. Warnings stay on their record
Freeze	Stops them moving while you sort it out
Spectate	Watch without being seen; `Backspace` stops
Kick	Players › Kick, or `/kick`. They can rejoin
Ban	`/ban <id> <hours> <reason>` or Players › Ban. 0 hours = permanent

- Always give a **reason**. The player sees it, and it's what the next staff member reads.
- **Ban someone who already left** from F10 › Bans with their identifier.

- **Unban** from F10 › Bans. Check the reason and who banned them first.

Anticheat

It runs on the server and watches for god mode, teleporting, speed hacks, entity and explosion spam, blacklisted weapons and models, injected scripts and known cheat menus.

- Each detection does what the owner set: **Log**, **Alert** (staff get a sound), **Kick** or **Ban**.
- F10 › Anticheat lists every detection with the player and the details. Open the player, ban them, or delete a false positive.
- **A legit player was caught?** Unban them in Bans, delete the detection, and tell the owner which detection fired so it can be loosened.
- Staff with `anticheat.bypass` (admins by default) are never flagged.

Managing players

- **Online:** F10 › Players. Open someone for revive, heal, teleport, inventory, money, items, job, gang and roles, plus their identifiers and warnings.
- **Offline:** F10 › Characters edits names, money and job of any character.
- **Refunds** after a bug: check Logs for what they had, then give it back with Players › money / items (or `/givemoney`, `/giveitem`). Note it in the report.
- **Stuck players:** `/goto`, `/bring`, or send them to character select from Players.
- **Lost car:** it's usually in the impound or a garage. My Vehicles shows where.

Managing the team

- **Add staff:** F10 › Roles & Permissions › pick a role › Members › **Add online player**, or **Add by identifier** for someone offline.
- **Remove staff:** the same list, remove them. Their access ends straight away.
- **Permissions** have three buttons: **Allow**, **Inherit** (the role it builds on decides) and **Deny**. The most specific rule wins, and deny beats allow.
- **New role** (e.g. LSPD Command): create it, pick what it builds on, set its priority below the people who manage it, allow only what it needs.
- **Other scripts' permissions** (an MDT, CCTV): add the script's permission name as a rule on the role.
- **Locked out?** In the server console: `fusion_role <your id> superadmin`.

Jobs & departments

- **Jobs** tab: grades, pay and which grades are bosses. Bosses hire, promote and fire in game from **M › Job**.
- `/setjob <id> <job> <grade>` sets anyone's job; `/setgang` their gang.
- **PIT rules** belong to each department: its command staff set them in **M › Emergency › Department PIT Rules** (allowed, seconds before PIT, top speed). Admins can set every department in Settings › Emergency Vehicles.
- **Jail:** police and staff use `/jail <id> <minutes> <charges>` or M › Jail; `/unjail` releases early.

Homes, weather & alerts

- **Housing** (F10 › Housing): **Add a home here** standing outside the real door; then **Set garage here** sitting in a car; **Entrances** for more doors outside (back door, balcony); **Go inside**, then **Exits**, for the ways out inside. Homes without a garage show *No garage yet*.
- **Residents** lists who lives in a building; **Evict** puts a home back on sale and moves its cars to a public garage.
- **Weather:** M › Weather & Time, or `/weather`, `/time`, `/blackout`. Severe events: `/weatherevent tornado` (also thunderstorm, flood, hurricane, blizzard; `stop` ends it). Everyone gets a warning first.
- **Alerts:** F10 › Alerts sends an emergency or AMBER alert to every phone. AMBER plates go onto the police BOLO list.
- **Announcements:** `/announce <message>` or the Dashboard.

Server upkeep

- **Settings changes apply straight away** for everyone; no restart needed.
- **Clean-up:** F10 › Server removes empty vehicles, stray NPCs and props.
- **Restarting a resource** on the Server tab lasts until the next restart. Use the switches in Settings for permanent changes.
- **Script Configs** (owner): change other scripts' settings, start them with the server (the green / red button), and update free scripts from GitHub. Every change is backed up.
- **Vehicle packs:** F10 › Server › Vehicle meta fixer fixes clashing sirens and liveries; the Handling tab tunes addon cars.

Updates & backups

- **Fusion updates** (F10 › Updates): new versions download and check themselves. Pick **Install** (players get a countdown), **When the server is empty**, or **At this time**. If a version doesn't start, the old one comes back by itself, and **Undo** is in the history.

- **Free scripts** update themselves at start or while the server is empty. Edited config files are kept, with the new defaults beside them as `.new`.
- **Back up settings** before big changes: F10 › Settings › **Export**. **Import** restores them.
- Back up the **database** regularly (phpMyAdmin › Export, or your host's panel). Characters, money and homes live there.
- **Never** delete the `[fusion]` folders to update by hand: that throws away pictures and media. Copy new files over them.

Staff keys & commands

`F10`	Admin panel	`Shift` `Ctrl`	Noclip faster / slower
`Home`	Noclip on / off	`Backspace`	Stop spectating
`Q` `E`	Noclip down / up	`Delete`	Delete what the entity laser points at

COMMAND	WHAT IT DOES
`/admin`, `/reports`, `/noclip`	Panel, reports, noclip
`/kick`, `/warn`, `/ban <id> <hours> <reason>`	Moderation (0 hours = permanent)
`/revive`, `/heal`, `/goto`, `/bring`, `/freeze`, `/kill`	Player actions on a player's id (`/revive` and `/heal` alone do yourself)
`/givemoney <id> <account> <amount>`, `/setmoney`, `/giveitem <id> <item> <amount>`	Money and items
`/setjob <id> <job> <grade>`, `/setgang`	Jobs and gangs
`/setrole <id> <role>`, `/removerole`	Roles (below your own)
`/car <model>`, `/dv`, `/fix`, `/setfuel`	Vehicles
`/announce <message>`	Message everyone

COMMAND	WHAT IT DOES
`/jail`, `/unjail`	Jail
`/weather`, `/time`, `/blackout`, `/weatherevent`	Weather and time

When something breaks

- **Write down what happened**: who, when, what they did, the exact message. Screenshots help.
- **Support file:** F10 › Support › **Create support file** (or `fusionsupport` in the server console). Passwords, keys and IP addresses are blanked out.
- **Open a ticket** on the Fusion Menu Discord with the support file: discord.gg/kVRqwDPsnJ
- A script misbehaving after an update? Look for `.new` files in its folder, or use **Undo update** in Script Configs.
- Something wrong straight after a Fusion update? F10 › Updates › **Undo**.
